Final Year Project

NSUTS: Smart Transportation System for North South University

Supervised By
AKM Bahalul Haque
Lecturer, Department of Electrical and Computer Engineering
North South University

Project Summary: My final year senior design project is based on the prototype of Radio Frequency Identification (RFID), Global Positioning System (GPS) and android application for authentic fare calculation, real-time tracking and passenger management. The passenger can reserve a seat on a bus, can see the available seat information of a bus and can track the real-time location of the bus through their android application. After getting into a bus, the passenger needs to swipe the RFID card through which RFID based bus fare payment system will take place. A web application is also developed to monitor the whole system so that this system can ensure the security of the passenger. So, this project emphasizes on minimizing the problems faced by the passengers, drivers and the concerned authority.
